Abstract (en)
[origin: WO2007004920A1] The present invention relates to a resilient connecting element (2) for connecting together a pair of chopsticks (3). The resilient connecting element (2) comprises a resilient flexible plate (2) and two pairs of breakthrough portions (4, 6; 5, 7) wherein each pair of breakthrough portions consist of a first and a second breakthrough portion. Each second breakthrough portion (6, 7) is positioned at a unidirectional distance perpendicularly from an imaginary line extending between each first breakthrough portion (4, 5). The distance (a) between said second breakthrough portions (6, 7) is equal or shorter than the distance (b) between said first breakthrough portions (4, 5). The present invention also relates to a chopstick arrangement (1) comprising a resilient element (2) and one pair of chopsticks (3) and to the use of said resilient connecting element (2) in combination with chopsticks (3) for eating food.
