Abstract (en)

[origin: US2006252542A1] The device and method of the present invention configures a gaming device so that an input device receiving input in one game state to be interpreted and applied according to one input state is reconfigured so that input received in a different game state is interpreted and applied according to a different input state. In an optional embodiment, multiple different input devices may be reconfigured to provide the same input in one or more game states. Also in optional embodiment, a set of input devices of a cardinality in one game state may be reconfigured into a set of input devices of different cardinality in another game state.
