Abstract (en)

[origin: WO2006129044A2] The invention concerns a fluid product dispenser comprising: a reservoir (10) for containing the fluid product at atmospheric pressure, said reservoir including an outlet (11); a dispensing member (4), such as a pump, mounted in the outlet (11) to draw and dispense the fluid product from the reservoir (10). The invention is characterized in that it further comprises: an intake valve (121, 13) for introducing the fluid product into the reservoir, said valve including a seat (121) and a mobile member (13) urged by elastic return means (14) on said seat; and a venting channel for communicating the inside of the reservoir with outside, the channel being provided with sealing means (15) mobile along an axis Z between an open position and a closed position.
