Abstract (en)  
[origin: DE202005009727U1] Supporting table (1) comprises a supporting surface (2) that can be varied in size and is formed by a link conveyor (3) consisting of individual support elements (4) mounted on a table frame (7) and guided via deviating rollers (5) that can be moved along the table frame. The link conveyor has on both sides transport chains (6) with protruding bolts on both sides. The bolts of an outer chain element are assigned to a support element. The bolts facing the support element are fixed on the support element. The bolts of a support element facing the table frame have a slide that can be moved in an axial direction of the bolts for selective engagement with the table frame.
