Abstract (en)

[origin: WO2007000354A1] The invention relates to means for fixing a drive mechanism (1) of a wiper device to a body shell element (7). Said drive mechanism (1) comprises a support plate (3) carrying at least one drive shaft (4) of a window wiper blade device, and at least two radial arms (8a, 8b, 8c), the free ends (9) thereof comprising means (16, 47) for fixing the radial arms (8a, 8b, 8c) to the body shell element (7), said fixing means (16, 47) co-operating with at least one opening (49) provided on the body shell structure (7). The invention is characterised in that the means for fixing the radial arm (14) consist of a plug-type cylindrical body (16, 48), at least one of the cylindrical bodies (48) comprising locking means for preventing the disengagement of the cylindrical body (48) from the opening (49) in which it is partially inserted. The locking means can be inserted into the cylindrical body (48).
