Abstract (en)
[origin: WO2006111665A2] The invention relates to a knit fabric (1) made of a single piece based on an arrangement constituted of at least two thread laps having at least one first lap defining a first pillar stitch weave and at least one or more unmeshed inlay laps, each of these unmeshed laps defining a weave, characterized in that it comprises at least one free pillar stitch thread (A1, A11, A12), one free pillar stitch thread being defined by a pillar stitch thread for which, over the longitudinal dimension of the knit fabric, every thread of these unmeshed laps approaching said free pillar stitch thread effects a half-turn at this free pillar stitch thread. The invention also relates to a medical textile device (2) obtained by unraveling at least two free pillar stitch threads of this knit fabric. The invention additionally relates to a method for producing this knit fabric.
