Abstract (en)

[origin: WO2007000003A1] A device for securing a pin (3) in a bearing fork (2), in particular for the coupling of a tie-bar (1) in a three-point hitch on a tractor wherein the pin (3) is provided at one end thereof with a stop (5) and at the other end with a retraction preventer stop. According to the invention, advantageous manipulation conditions may be achieved, whereby the retraction prevention stop comprises a bolt (7) which may be displaced on the pin (3) perpendicular to the longitudinal axis thereof such as to lie within the cross-sectional outline of the pin (3) in the unlocked position.
