Abstract (en)

[origin: DE102005028906A1] The apparatus has a sensor for detecting information that characterizes the banknotes to be checked. The sensor is connected to a flexural resistant carrier via an adhesive layer (20), where the carrier is connected to a component e.g. housing, of the apparatus via another elastic adhesive layer (40) and/or is directly connected to a banknote processing machine. The sensor is made from a semiconductor material e.g. gallium arsenide.
