Abstract (en)

[origin: DE102005028599B3] The installation has an electric actuator with at least one capacitive sensor with at least one actuating region. This region has a carrier layer of electrically insulating material and a conductive sensor layer functionally connected to an electric control unit. The sensor layer (9) is arranged on a side of the carrier layer opposite the actuation side of the actuation region and is connected to the control unit via an electrically conductive layer (23).
