Abstract (en)

[origin: EP1897830A2] Device for connecting a first material strip (01) to a second material strip (02) comprises a roller (03) for the first material strip driven on its axle (11) by a drive unit (13) and a control unit arranged on the drive unit for operating a pressure element (21) arranged on the first material strip to adjust the revolution. Preferred Features: The control unit reduces the revolution of the drive unit for the duration of the pressing of the first material strip on the second material strip. The pressing element is formed as a brush which can be adjusted on the first material strip.
