Abstract (en)

Provided is a method for preparing an electroconductive mayenite type compound with good properties readily and stably at low cost. A production method of an electroconductive mayenite type compound comprising a step of subjecting a precursor to heat treatment, is a method for preparing an electroconductive mayenite type compound, comprising a step of subjecting a precursor to heat treatment; wherein the precursor is a vitreous or crystalline material, which contains Ca and Al, in which a molar ratio of (CaO : Al₂O₃) is from (12.6:6.4) to (11.7:7.3) as calculated as oxides, and in which a total amount of CaO and Al₂O₃ is at least 50 mol%, and wherein the heat treatment is heat treatment comprising holding the precursor at a heat treatment temperature T of from 600 to 1415°C and in an inert gas or vacuum atmosphere with an oxygen partial pressure P O₂ in a range of P O₂ #; 10⁵ × exp{[-7.9 × 10⁻⁴ / (T+273)] + 14.4} in the unit of Pa.
