Abstract (en)
[origin: EP1898278A1] The wristwatch has an additional flexible strand formed of three parts, where the strand has an end with a point (15) for pivoting on one of two strands of a wristlet (5). The pivoting of the point is performed around an axis that is perpendicular to a plane of the strands. Another end of the flexible strand supports a deploying case (3), for maintaining the case on the wristlet, in a normal position, by using locking/unlocking units e.g. press type device, or for permitting deployment of the case in the hand of a user, by acting on the locking/unlocking units.
