Abstract (en)  
[origin: WO2006129009A1] The inventive animal breeding plant comprises an animal stall area (1a-1f), means (11) for sharply flushing a cleaning fluid in said area in order to wash it and a channel which is used for recovering a mixture formed by said cleaning fluid and wastes flushed thereby and is arranged in front of said flushing means with respect to said area. The flushing means comprise at least one bucket (11) which is movably mounted between filling and flushing positions and whose shape is selected such that, when the filling level thereof with the cleaning fluid attains a predetermined threshold, the gravity center of the thus filled bucket (11) is shifted to such a point that the bucket (11) is tilted from said filling position to the flushing position in such a way that the fluid is sharply flushed in the area (1a-1f).
