Abstract (en)  
[origin: WO2006122555A1] The present invention relates to a mattress (101) , wherein the mattress is adapted to be used by a person during rest and comprises a support element (105) , wherein said support element is covered by a first layer of a material (107) having temperature regulating properties by absorbing and releasing heat and a second layer of down. By using a material with temperature regulating properties together with a layer of down filling (109) , very good properties of minimizing temperature variations are obtained.
