Abstract (en)
[origin: WO2007000005A1] The invention relates to an arm rest for positioning the arm of a patient in relation to an examination table, especially during a tomographic radioscopy examination or an operation. Said arm rest comprises an essentially flat base plate (1) that can be pushed under the body of the patient or beneath the mattress of the examination table, a supporting plate (2) which is inclined in relation to the base plate (1) or arranged at an angle thereto, and a long carrier element (3) which is arranged on the end of the supporting plate (2), at a distance from the base plate (1), and is longer (9) and narrower (8). According to the invention, the carrier part (3) is inclined in terms of the longitudinal dimension (9) thereof in relation to the base plate (1).
