Abstract (en)

[origin: US2007017847A1] The invention relates to a case for receiving a blister pack, comprising a first case half and a second case half. The halves are hinged on one another. The first case half is designed as a pocket for receiving the blister pack and has an outer part and an inner viewing part and also first apertures in the viewing part and second apertures in the outer part. The first apertures are at least partially aligned with the second apertures, specifically at least where the receptacles are located after the blister pack is received in the pocket. The second case half has a first compartment for receiving a first display means displaying days of the week, and first windows for displaying the days of the week in an inner viewing surface of the second case half in the area of the first compartment. The first windows are arranged in such a way that they are aligned with the columns of the receptacles of a medicament pack received in the pocket.
