Abstract (en)
[origin: DE202005010848U1] The work platform (10) has a telescopic support (11) mounted rotatable about a rotational axis in relation to the machine frame (2) through a rotary drive. A lower end of the telescopic support is fixed on the rotary device at a distance from the rotational axis. The work platform is rotatable relative to the telescopic support about the longitudinal axis through a second rotary drive which is mounted at the upper end of the support. The rotational device is formed as a toothed rim rotatable about the rotational axis through a pinion.
