Abstract (en)

[origin: WO2007003844A2] The invention relates to a device (1) for feeding a web (6) of a machine, particularly of a packaging or graphic arts machine, comprising a frame (3) on which at least one shaft (4) is mounted, which is provided for receiving a spool (5) of the web (6) and which is capable of unwinding said web (6) toward tensioning means (7). Means (8) that are capable of carrying out an angular re-directing of said web (6) toward the machine are also mounted on said frame. The invention is characterized by the fact that said angular, in particular, right angle re-directing means (8) can translationally move across the setting means.
