Abstract (en)

[origin: US2009165391A1] The invention relates to a door for closing off a loading opening of a clothes dryer includes a holding device surrounding the edge of a non-opaque pane in a door frame, via a fixing element and/or a part of the holding element arranged on the housing side. A moisture escape-preventing elastic sealing element is mounted in the non-opaque pane area. In order to prevent fluff accumulation in the connection points between the frame and the non-opaque pane, the inventive sealing element is molded to the part of the holding element placed on the housing side and fits the shape of the internal surface of the non-opaque pane with the aid of a lip-shaped ring.
