Abstract (en)

[origin: WO2007003772A1] The invention relates to a dispenser for dispensing a determined quantity of a liquid treating agent (6) in a flush tank (3) when it is activated. The inventive dispenser comprises at least one metering cavity (12) whose volume (V) is close to the volume of the dose (V+v) of a dispensable product, first means (14) for communicating said cavity (12) with a product (6) storage tank (2), second means (19) for controllably connecting the cavity (12) with outside, closing elements (28,39) of the second means (19), which are controlled by a member (32) floatingly mounted on a surface (N) of water contained in the flush tank (3) and make it possible to close them during the waiting phase of the flushing device and to open said means when the flushing device is actuated.
