Abstract (en)
[origin: WO2006128887A1] The invention concerns glass structural building elements. The inventive structural building element comprises one or more monolithic or laminated glass sheets (13, 14), such as a beam or a wind bracing, characterized in that it comprises means for being fixed (16) to the building structure or the braced wall, said means optionally serving to combine several elements in the extension of one another, said fixing means being made such that they do not cause the glass sheets to be compressed in their thickness.
