Abstract (en)  
[origin: WO2006120714A2] Recessed handle for sliding leaves; the handle including a respective elongated casing (10) including a substantially flat plate (11) and a pair of sides (14) facing each other, extending transversely from plate (11) and delimited longitudinally by respective end portions, each of which is provided with respective hooking means of elastic type for stable connection of casing (10) to the leaf itself; the hooking means including a toothed member (20), elastically activable and capable of cooperating with plate (11) to connect the casing (10) to the leaf itself by gripping it; the toothed member (20) being connected elastically to a concave body (22) installed solidly between the sides (14) and selectively movable to form a locking module securing the casing (10) to the leaf, for the purpose of simplifying the relative operations of preparing said casing (10) for installation to the said leaf.
