Abstract (en)  
[origin: WO2007006852A1] A lock for internal door comprising a lock casing (1) with a latch bolt (2) spring-loaded into a position, in which it protrudes from the lock casing, a first operating axis (4), on which a first follower (5) is mounted, which follower is turnable by a lever handle, turning knob or the like and arranged, with the help of a turnable force transmission means (7), to retract the latch bolt (2) into the lock casing (1), and a second operating axis (11), on which a second follower (12) is mounted, which follower is turnable by a key, turning knob or the like for locking the latch bolt (2) optionally into its protruding position. The lock casing (1) is provided with a locking piece (13) which is removable independent on the latch bolt (2) and which may, by means of said second follower (12), be moved from a first position allowing the retraction of the latch bolt (2), to a second position, in which it is adapted to prevent the retraction of the latch bolt (2) and to provide dead- locking of the latch bolt (2).
