Abstract (en)  
[origin: WO2007003176A1] The invention relates to a door system containing at least one door element for opening and closing an opening section, a door holding element for receiving the respective door element in a mobile manner, and at least one vertically arranged identification system for people, objects or the like and/or at least one vertical hot-air curtain device that extends essentially over the entire height of the opening section and produces a hot-air curtain shielding the opening section. The hot-air curtain device and/or the identification system are mobile in the horizontal direction in the region of the opening section.
