Abstract (en)  
[origin: US2009312873A1] The invention relates to an access lock for cyclically permitting people to pass through. The access lock has at least two locking elements (12, 14), with each of the locking elements (12, 14) being movable, independently of the respective other locking element (14, 12), on a closed path between a locked position which locks the passage at a locking point and an open position which opens the passage.
