Abstract (en)

[origin: DE102005030362B3] The accumulator (1) has a temperature storage medium whose aggregate condition change is reverted from liquid to solid, and a thermo-radiating surface (12). The temperature range for the aggregate condition change lies between 40 and 60 degree Celsius. The accumulator is arranged detachably within a region of a thermo-radiator of a cool box and is fastened to the radiator in the form of a bag by holding or strutting unit.
