Abstract (en)

Eccentric cycle ergometer comprising an actual ergometer (1) and a bicycle (10), wherein said ergometer (1) transmits movement via a cogged belt (6) to a crown wheel (8) mounted in line with the rear hub of the bicycle, so that the transmission of the movement to the crown wheel (11) takes place via the chain (12) of the actual bicycle, which is wound on said crown wheel (12). The cycle ergometer also comprises a control panel (20) connected to a power unit (21), said control panel (20) being provided with a touch screen (22) whereby it is possible to set any one of the following operating modes: constant rate, constant power, constant torque.
