Abstract (en)

[origin: DE202006014455U1] The device has a material feed opening (3) and inlets which are arranged on top of each other. An outlet (8) is provided for removal of separation air and sighted material. A discharge device is provided for separating coarse material. The outlet is arranged for the purpose of cross flow review of a material below an upper inlet (5) for separation air on a side opposite to the inlet of a separator (1).
