Abstract (en)

[origin: EP1900592A1] The traction device has a vehicle-sided connectable supporting frame (1) for supporting at corresponding stoppers of a vehicle. The frame is provided with reinforcement ribs (17, 18, 19, 20) on front side, where the ribs extend in a traction direction. The frame is provided with two flanges (14b, 15b) on each side for supporting at the stoppers. Supports (22) are arranged between the ribs and flanges in such a manner that highly loadable areas of the supporting frame are reinforced. A recess (21) is provided between the flanges.
