Abstract (en)  
[origin: EP1900932A2] The injector has an injecting valve unit locking or releasing an injection opening and controlled by an actuator-operated control valve. An actuator (5) has an actuator head (7), which acts on a coupler piston (9). A leveling disk (61) is arranged between the head and the piston for adjusting longitudinal tolerances. An extension (71) is formed at the head and accommodated in a recess in the disk. A bulge (85) is formed at the disk in such a manner that a distance dimension between the head and the piston is different from predetermined dimension during wrong position of the disk.
