Abstract (en)

[origin: WO2007001167A1] The present invention relates to an element system for forming a paving, comprising a first and a second concrete element, wherein during use a side surface of the first element is situated in the vicinity of a side surface of the second element such that an intermediate space is defined between the side surfaces and wherein the intermediate space is substantially filled with a joining agent such that, when the joining agent is cured, it forms a flexible joint between the elements.
