Abstract (en)

[origin: WO2007000215A1] The invention relates to a compressor (2) for a tyre-repairing kit comprising a second toothed wheel (8) provided with a journal (22). Said journal (22) is functionally connected to a piston (26) in such a way that said piston moves up and down when said second toothed wheel (8) rotates. The inertial forces of the piston (26) carrying out the up and down movement are compensated by a counterweight (30) which is embodied in an integral manner with the second toothed wheel (8) and is fixedly connected thereof.
