Abstract (en)

[origin: WO2007003429A1] The invention relates to a system comprising a first electronic device (2) a security module (1) and a second electronic device (9, 10, 14, 21). The security module (1) is fixedly connected to the first electronic device (2) and comprises a security system (3) for safely storing data and/or carrying out cryptographic operations and a first interface (4) for communicating with the first electronic device (2). The inventive system is characterised in that the security module (1) comprises a second interface which makes it possible to carry out a direct wireless communication with the second electronic device (9, 10, 14, 21).
