Abstract (en)

[origin: EP1903591A1] The load disconnecting protection switch has a cable outlet on one side, and a lower part (20), on which hooks (21) are arranged aligned in a direction for partially surrounding the bus bars. The lower part and an upper part (10) are so arranged that the lower part is locked on the hooks in multiple different positions in relation to the upper part. The locking of the lower part on the upper part takes place by sliding of hook-shaped clamping element (22) fixed on the lower part on the holding devices integrated in the upper part.
