Abstract (en)

[origin: WO2007003532A1] The invention relates to surgical devices comprising an operating handle (1) with an inner injection cannula (3) and an outer suction tube (2). A drain channel is provided between the inner injection cannula (3) and the outer suction tube (2). The suction tube (2) comprises several suction openings (11). According to the invention, the capacity of the surgical device may be increased, whereby each suction opening (11) is provided with a separation edge, the suction channel has a guide wall (14) for a suction flow and the outer suction tube (2) has a rotating and driven design.
