Abstract (en)  
[origin: WO2006130624A2] A server for facilitating real-time betting, wherein the server communicates with clients via a distributed computing network. The server includes a memory storing an operating system, an instruction set, event data related to a sporting event, gambler data related to gamblers participating in a competition based upon the sporting event and site data related to electronic pages associated with the real-time para-mutuel betting. A processor runs the instruction set and communicates with the memory and the distributed computing network. The processor is operative to enroll the gamblers by presenting betting rules associated with the sporting event, collect wagering from the gamblers, accept predictions for discrete events within the sporting event from each gambler and determine a first winner of the competition based upon the predictions. Applications include lotteries with entries received from mobile devices.
