Abstract (en)

[origin: WO2007010123A2] The invention concerns a method for identifying a plurality of samples (1), characterized in that it includes: a step of preparing an assembled storage of a plurality of samples (1), in a block (3) comprising a first identification marking M1 and a plurality of detachable supports (2), each containing at least one of said samples; a step of separating one support, consisting in separating the support (2) corresponding to said block, and in irreversibly associating said support with a second identification marking M2. Said method enables samples to be securely identified and to be easily traced.
