Abstract (en)

[origin: WO2006136237A1] The invention relates to a method and device for separating magnetic particles, for separating magnetic particles from a sample housed in an inner space (1) of the separating device. In accordance with the invention, the magnetic field is generated with a specific configuration of the magnets (3). This specific configuration enables devices of different sizes with a reduced number of magnets or types of magnets to be established.
