Abstract (en)
[origin: WO2007003172A1] The invention relates to a roller blind arrangement, especially for motor vehicles, for covering a roof opening (2), said arrangement comprising a roller blind strip (5) which can be wound up and down by means of a winding shaft (4). At least one deviating means (10) is used to influence the course of the roller blind strip (5) in the direction of displacement thereof, the at least one deviating means (10) being arranged at a fixed distance from the winding shaft in the longitudinal direction of the vehicle.
