Abstract (en)
[origin: WO2006119636A1] A disposable container for an edible fluid defines a top edge and a bottom edge. The container includes a side wall extending between the bottom edge and the top edge. The fluid is stored in a chamber of the container. A layer of flexible film defines a channel extending between the bottom edge and the top edge. The channel is positioned next to the side wall. The layer of flexible film may be fixed to the side wall. The layer of flexible film may be made from a sheet defining the side wall. A disposable container may be provided with an optional mouthpiece. The mouthpiece moves between 3 positions. In the first position, the mouthpiece is closed and has not been opened. When the mouthpiece moves to the second position, the user gains access to the contents of the container. The mouthpiece may be moved to a third position, in which the mouthpiece is closed, but it is apparent that the container has been opened.
