Abstract (en)

[origin: WO2007006671A1] The aim of the invention is to be able to configure a system comprising at least one module in an especially simple and flexible manner. To this end, the inventive method comprises the following steps: at least one configuration file (1) independent of the implementation is created and/or information stored in the at least one configuration file (1) is modified; configuration data stored in a configuration data container (3) is automatically generated and/or automatically updated according to the information stored in the at least one configuration file (1) independent if the implementation; the at least one module is automatically configured according to the configuration data stored in the configuration data container; and configuration rules are used.
