Abstract (en)

[origin: WO2007009406A1] Switching apparatus, particularly power circuit breaker with optimum utilization of the area of the base (1) of its case, with effective fitting of especially the sideboards (4) of its switchgear module without the use of screws and/or rivets with a concurrent increase in the effectiveness of the assembly steps and decrease in their number, which is achieved so that, at least for the sideboards (4) of the switchgear module, in the dividing plates (2) of the base (1) of the switching apparatus case, sliding clasp grooves (5, 6) are created, with transition to the upper half-grooves (7, 8), from which at least one is equipped on its wall with stopping jut (9) for stroke with at least one hollow (10) created on the body of each sideboard (4).
