Abstract (en)
[origin: WO2007010130A1] The invention concerns a system for converting digital video broadcast data into a form adapted to their reception by one or more wired or radio receivers comprising: means for receiving digital video broadcast data consisting of elementary streams and signaling data; means for identifying which elementary streams are required by one or more wired or radio receivers; means for detecting and extracting the signaling data and any of the required elementary streams of received digital video broadcast data; and means for dynamically transmitting the extracted elementary streams to the wired or radio receivers.
