Abstract (en)
[origin: EP1905686A1] The craft (1) has a pilot cabin (4) with an access opening (402) on its rear side. A frame is provided at a level of the opening and supports a sliding plate (5) sliding between a totally lowered position to access the opening and a totally raised position to close the opening. The plate has an actuator e.g. hydraulic actuator, and a port which allow fast sliding between the positions, and is made of transparent material such as polymethyl methacrylate or glass. An ad hoc housing (6) retracts the plate and is arranged in a hull (101) of the craft in the lowered position to access the cabin.
