Abstract (en)

[origin: EP1905720A1] The method involves demounting an old door drive (6a) and an old car door/shaft door coupling (7a) from an elevator car. A new door drive and a new car door/shaft door coupling are mounting at the elevator car, where fastening points of the new coupling are arranged in a region above the door opening. The old shaft door lock (25a) is demounted and a new shaft door lock is mounted at the shaft door in correspondence with the arrangement of the new car door/shaft door coupling. An independent claim is also included for a modernization kit for modernizing an elevator door system of an elevator installation in a building.
