Abstract (en)
A tile hook for the fastening of a number of roof tiles, attached to a pitched roof, to a tile lath comprises a hook part which is provided at one end with fastening means which can be fastened to a tile lath. The tile hook also has a clamping part which is attached to the end of the hook part that opposes the fastening means. The clamping part is provided with a plate-like top which can engage with the upper surface of two roof tiles positioned diagonally opposing each other. The plate-like top and the hook part form two separately manufactured components which may or may not be detachably fastened to each other. The hook part is resilient and the plate-like top is more rigid than the hook part.
