Abstract (en)

[origin: EP1905921A1] The structure has a post (5) articulated at an end on a plate (3) around an articulation axle (4) between a folded position and an opening position, where the structure is made of corbel. A strut (7) connecting the plate and the post (5) includes tubular columns (11) articulated on each other. A rod (30) and a maneuver unit (34) block the strut in the folded position. A support lug (6) is integrated to the post at a free end of the post and projecting from the free end, where the lug is shifted with respect to a plane orthogonal to the plate passing via the axle, in the opening position.
