Abstract (en)
[origin: EP1905942A1] The operating position bearing (10) has a housing (12) and a spindle (14), on which a reel (16) for holding an operating cord, and a reversing reel are mounted. A pivoting segment stop (24) is provided, which engages in the movement path of a wedge segment (18) from a stop position. The segment stop is pivoted around an axle (34), which is at a distance to the other axle (28) and by which a lever (26) is formed as operating rocker and separated from the segment stop, is pivoted from the stop position into the release position.
