Abstract (en)  
[origin: EP1906267A1] The watch has a support element i.e. bottom plate, and strike gong e.g. cathedral type gong, forming a winding and including two ends. The gong is secured via the ends to the support element. A gong carrier is mounted on the support element, where the ends of the gong are secured to the gong carrier by brazing or welding. A length of the gong is selected so as to take an account of phase opposition phenomena. Another gong carrier is mounted on the support element, where one of the ends of the gong is secured to the latter gong carrier.
