Abstract (en)

[origin: EP1906701A2] The method involves automatic analyzing of a hearing situation, of the hearing device. A parameter of the signal processing device (SV) of the hearing device is automatically adjusted as a function of the hearing situation in a parameter range. The parameter of the signal processing device is manually adjusted to a value in another parameter range outside the former parameter range. The automatic adjusting in the former parameter range is terminated. An independent claim is also included for a hearing device with a signal processing device.
